IMPORTANT NOTE

- This session will be recorded so if you don't want your face or voice to be recorded, please make sure your microphone and camera are off.
- Meeting etiquette: If you're not speaking, please make sure your microphone is muted.
- Please put any questions in the chat and we'll pick these up as we go or respond in the chat.

NHS Type 2 Diabetes Path to Remission Programme

Dorset

Referrer support and training

22nd February 2024

MOMENTA NEWCASTLE

NHS Dorset

Agenda

- Welcome, recording, questions
- Background and benefits
- The programme
- Roles and responsibilities, pathways
- Medications adjustment
- Referral support
- Next steps

Background and benefits

Research

- Studies: DiRECT, DROPLET
 - 'Remission' of T2D possible
- Intervention group at 12 mths:
 - 24% lost 15kg+
 - 46% achieved remission (70% retained at 24 mths)
 - Fewer adverse events
- Remission closely linked to weight loss
- Remission: HbA1c
 <48mmol/mol, >6 mths, no meds

Benefits

Patients:

- Weight loss, T2D remission
- Reduction in medications (av. 50%)
- Impact on comorbidities
- Healthy living / Quality of life
- 12 month programme & TDR free
- Participant case studies
- Practices:
 - Free service (NHSE-commissioned)
 - Referrals: WM Enhanced Service
 - Anecdotal: Reduces demands on practice by successful participants (weight loss, impact on comorbidities, peer support). Also medications reviews
 - Extensive support

Framework and Momenta

NHS England approach

- Piloted as NHS Low Calorie
 Diet programme (2020+) in 20
 ICBs
- Similar emerging results to DIRECT
- Now a national Framework (like NDPP):
 - NHS Type 2 Diabetes Path to Remission Programme (T2DR)
 - Design similar to DiRECT
 - Jointly commissioned w' ICB

Momenta Newcastle

- T2DR provider: Momenta
- Delivering since 2020
 - Originally: Birmingham & Solihull
 - Now in 13 ICBs + others
 - E.g. BSW, Somerset and BNSSG
- Early outcomes in line with DiRECT / NHSE pilot:
 - 11-13% weight loss at 3 months
 - Maintained into Phase 3
 - Positive uptake (70-80%)
 - Helps address health inequalities
- Launch: 1st April
 - Soft-launch March

Agenda

- Welcome, recording, questions
- Background and benefits
- The programme
- Roles and responsibilities, pathways
- Medications adjustment
- Referral support
- Next steps

NHS Type 2 Diabetes Path to Remission

- Follows principles of DiRECT, delivered by trained Coaches
- Three phases over 12 months, ALL free to participants:
 - 12 weeks: 8-900 calories/day TDR products
 - 6 weeks: Real food reintroduction
 - 7-8 months: Building healthy eating and activity habits into daily life
 - Plus: TDR Rescue package for those relapsing (>2kg regain)
- Delivery format: In-person 1:1 clinic or Digital
- TDR product supplier: Habitual
- App platform: Habitual (Momenta content and coaches)
- Clinical staff available to non-clinical Momenta teams

Eligibility criteria

Inclusion

Aged 18-65

- T2D diagnosis within last 6 years
- BMI >=27kg/m² (>=25kg/m² if BAME origin)
- Attended monitoring and diabetes review in last 12 months
- HbA1c within 12 months:
 - If on diabetes medication, HbA1c >=43 mmol/mol (6.1%)
 - If not on diabetes medication, HbA1c >=48 mmol/mol (6.5%)
 - In all cases, HbA1c must be <=87 mmol/mol
 (10.1%)

Exclusion

- Current insulin user
- Currently breastfeeding
- Pregnant or planning pregnancy within 6 mths
- Heart attack or stroke in last 6 months; severe heart failure (New York Heart Association grade 3 or 4); severe renal impairment (most recent eGFR <30mls/min/1.73m2); active liver disease (not including NAFLD); active substance use disorder; active eating disorder; porphyria; or known proliferative retinopathy that has not been treated
- Had bariatric surgery
 - Health professional assessment; or for whom safe and robust medications adjustment is not practical in a primary care setting

MOMENTA NEWCASTLE

NHS Type 2 Diabetes Path to Remission Programme Momenta participant journey over 12 months

These sessions follow Registration, Individual Assessment and Booking.

RESOURCES Digital participants also receive access to our App

Phases 1 & 2 Workbookand Lifestyle logbook*TDR product bookletHigh performance

Agenda

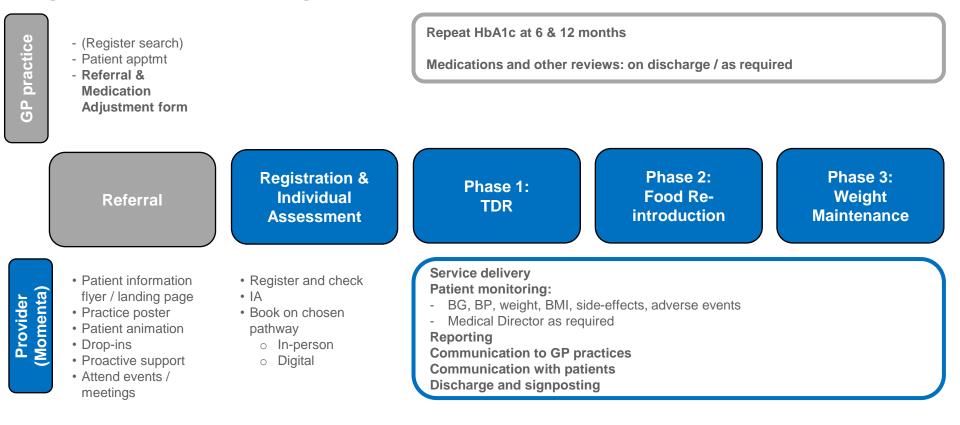

- Welcome, recording, questions
- Background and benefits
- The programme
- Roles and responsibilities, pathways
- Medication adjustments
- Referral support
- Next steps

Deprescribing: First day of TDR

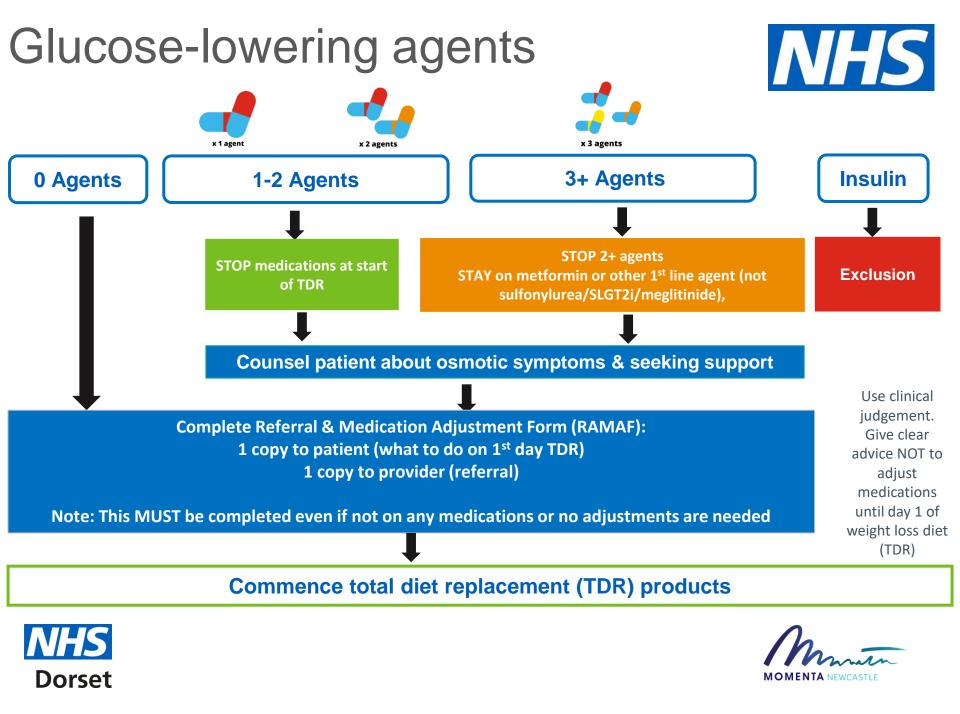

Data from Counterbalance study (informed DiRECT)

- Starting medications more familiar than stopping to most
- Comprehensive NHSE Expert Reference Group guidance
 - Safe, evidence-based, pragmatic: More conservative than DiRECT
 - Clinical responsibility remains with referring GP
 - Guidance does not replace clinical judgement
 - If unsure, consult with a colleague or do not refer.

Which glucose-lowering agents are safe with TDR?

| Class of medication | Examples of drugs | Is this safe with TDR? |
|------------------------------|---|----------------------------|
| Biguanides | Metformin | Yes – safe |
| Sulfonylureas | Gliclazide, Glibenclamide, Glimepiride | No - risk of hypoglycaemia |
| Meglitinides | Repaglinide, Nateglinide | No – risk of hypoglycaemia |
| Thiazolidinediones | Piogliazone | Yes - safe |
| DPP4 inhibitors (-gliptins) | Linagliptin, Alogliptin, Sitagliptin, Saxagliptin, Vildagliptin | Yes - safe |
| SGLT2 inhibitors (-flozins) | Dapagliflozin, Canagliflozin, Empagliflozin, Ertugliflozin | No - risk of ketoacidosis |
| GLP-1 analogues (-tides) | Exenatide, Dulaglitide, Liraglutide, Lixisenatide, Semaglutide | Yes - safe |
| Alpha-glucosidase inhibitors | Acarbose | Yes – safe |
| | | |

(insulin is not included here as people treated with insulin are not eligible for the NHS LCD Programme pilots)

NHS England and NHS Improvement

Restarting glucose-lowering agents MHS

If Momenta flags that blood glucose is >15, or HbA1c at 6 or 12 months has risen:

- Metformin first line and is also safe in TDR
- Pioglitazone or DPP4 inhibitors are also safe in TDR

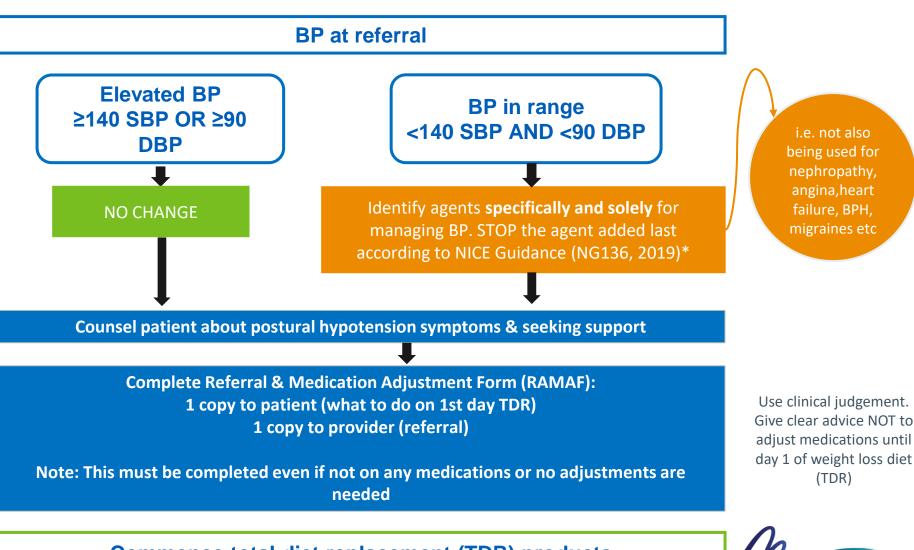

Sulfonylureas, meglitinides or SGLT2 inhibitors MUST NOT be used during TDR for safety reasons

If insulin initiation is deemed clinically necessary at any stage patients MUST stop the programme

Adjusting BP-lowering agents

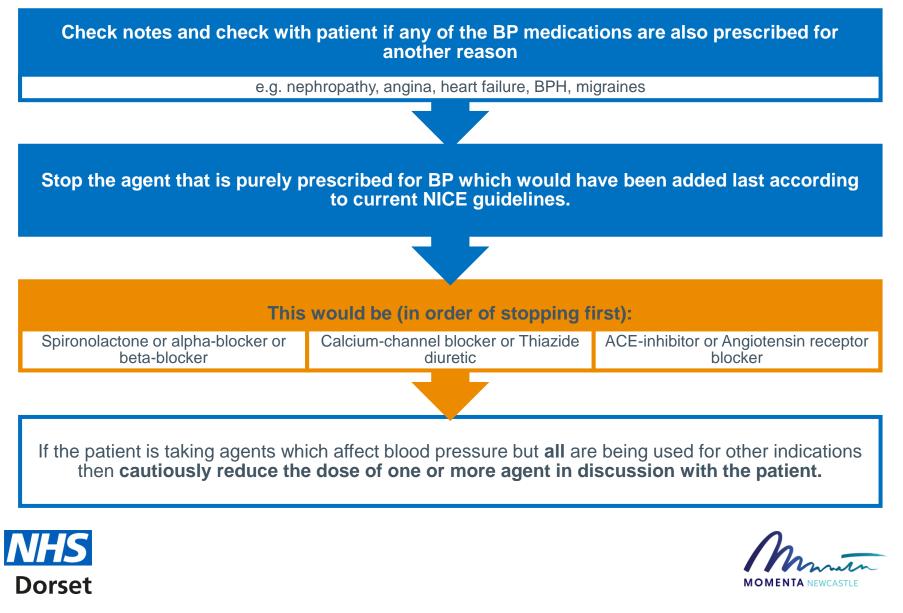

Commence total diet replacement (TDR) products

NFS

Which BP medication to adjust? MHS

Subsequent BP agent adjustment

- SBP 160-179 OR DBP 100-119 : Increase or uptitrate as per NICE Guideline
- SBP ≥180 OR DBP ≥ 120: Same day contact with GP practice. Increase/uptitrate per NICE

 SBP<90 or DBP<60 or postural symptoms reported: Repeat the same process for BP adjustment (on previous slide)

Agents being used specifically and solely for managing BP in a particular patient, are the priority for adjustment

Medications needing adjustment: Weight / dietary changes

Some medications may need to be adjusted due to changes in body weight or dietary intake

Some may be prescribed or administered by other services or settings

Ask yourself 'if someone lost weight or had a major dietary change, is the dose of this medicine likely to need adjustment?'

Responsibility of referrer to make sure that processes are in place for medications to be adjusted

If this cannot be done safely then the patient should not be referred to the T2DR programme

Examples – not exhaustive

- Warfarin
- Direct oral anticoagulants (DOACs)
- Digoxin
- Phenytoin
- Ciclosporin
- Antifungals voriconazole
- Long term antibiotic therapy (e.g. isoniazid) Low molecular weight heparin
- Infliximab (and other biologics)
- Long term antibiotic therapy (e.g. macrolides, aminoglycosides, fluoroquinolones, beta lactams)

Agenda

- Welcome, recording, questions
- Background and benefits
- The programme
- Roles and responsibilities, pathways
- Medications adjustment
- Referral support
- Next steps

Making a successful referral

Step 1: Identify & invite eligible patients

Search, screen and invite: Search / screen, template SMS / letter, patient landing page Usual care: Discuss at diagnosis, annual review, patient request, prompted by pop-up Bespoke: Patient event

Step 2: Referral appointment, including medications adjustments

Appointment (typically 15 mins): Explain programme and discuss medication changes Make patient aware medication changes to start on day 1 of TDR Provide patient with copy of MAF

Step 3: Send referral

Ensure all sections on referral form and MAF are fully completed and email to: momenta.t2dr-dorset@nhs.net

Referral form

Complete the referral and medical adjustment form and email to Momenta: <u>momenta.t2dr-dorset@nhs.net</u>

Top tips: Searches and referrals

- Searches
 - Sense check and manual screen to confirm eligibility / appropriateness
 - Historical coding challenges
 - Long lists can be reviewed and invited in batches/triaged.
- Referral And Medications Adjustment Form
 - Confirm eligibility criteria are met before proceeding
 - Ensure up to date BMI, HbA1c and date of diagnosis
 - Ensure patient receives a copy of the Medication Adjustment Form section of the referral and they are clear what they need to change and when (first day of TDR)
 - If no medications need adjusting you must still complete the medication adjustment section of the referral (check acutes as well as repeats)
 - We are unable to progress the referral until it is complete and patients recall the information.

GP Momenta Practice (Provider)

MOMENTA NEWCASTLE

NHS Dorset

T2DR venue requirements

Essential

- Comfortable space for 3 seated participants
- Chairs and a table / desk
- Good local public transport (and parking if needed)
- Clean and appropriately lit and heated / cooled
- Meet accessibility requirements
- Free wifi internet access

Ideally

- Open for extended hours (evenings, weekends)
- Staffed
- Used for other health / community services
- Qualified first aider onsite
